

'WATT' DOES DEMAND COST?

Your Touchstone Energy® Cooperative 

WATTS x 1,000 = kW (DEMAND)

Demand is billed as the total kW during the highest use interval over the entire billing cycle. To estimate demand charges, use the following average appliance kW (based on 15 minutes of operation). Add up all of the electric appliances you would have running at once and multiply by the current monthly demand charge.

TOTAL kW of HIGHEST INTERVAL x \$\$/kW = DEMAND CHARGE
